Personal Statement:

I believe that I have many of the qualities, experiences, and capabilities that can render me suitable for working in middle grade in general surgery.

I have been working in the field of general surgery for almost 8 years now in some of the busiest hospitals in Egypt, and I have encountered hundreds of general surgery cases. I am dedicated to this profession since 2011 after graduation, and I have strong enthusiasm to continually develop myself professionally. I can work under pressure, overtime, and in exceptional circumstances as long as I am progressing in this profession. I have plenty of operative experience. I think -and my colleagues and seniors also support this- that I am good at clinical skills including assessment of patients and in operative hand skills.

I respect all my patients and consider their benefit and safety the utmost goal of our work as doctors.

Education & Professional Qualifications
